

OpenERP Integration for Manufacturing & Retail

Customer

Ninh Khuong is a leading company in Vietnam specialized hand embroidery art into the daily life in order to make the children's fashion products, household items, decorative items, etc.

With over 200 employees and 20 stores around Vietnam, the company is providing more than 60,000 products for domestic and many foreign markets.

Challenge

- Green field implementation to a company that had never used an ERP solution. Only applied separated software for managing separate
- To provide a solution for 60,000 SKUs with different sizes, color, style...
- Warehouse control procedures were not in place.
- There were almost no tools to support information integration, most of the logistics operations were manually logged.
- Information was not transparent among business and operation units which led to inefficient planning and operation.
- Simplify processes and consolidate activities where possible.
- Preparedness for future expansion plans.
- Standardization of business processes and integration in a single ERP system

Solutions

- Provide an OpenERP solution including the following modules: Sales, Purchase, Manufacturing, POS
- Efficient development of customer specific solutions while, at the same time, pursuing standardization.
- Transparently mapping the logistical procedures with Traceable lot-related production.
- Control up-front profit segment and cost. Clearly identify cost drivers through transparent accounting procedures and cost management.

Results

- Efficiency in end-to-end business processes by streamlining the internal and external operations.
- Improved decision making through achievement of data integrity and real-time reporting.
- Better inventory control by eliminating manual processes and by improving inventory accuracy.
- Improved monitoring, managing, and controlling of primary sales data.
- Optimized production control by facilitating efficient
- Planning, execution and reducing costs.
- Efficient quality management by handling traditional quality tasks: planning, inspection, certification, notification and control.
- Better accounting practices, fully compliant with Vietnam Accounting Standard.
- Improved financial control, gained visibility into the organization with financial and management accounting functionality.
